

Publier l'application Documenso

Architecture fonctionnelle

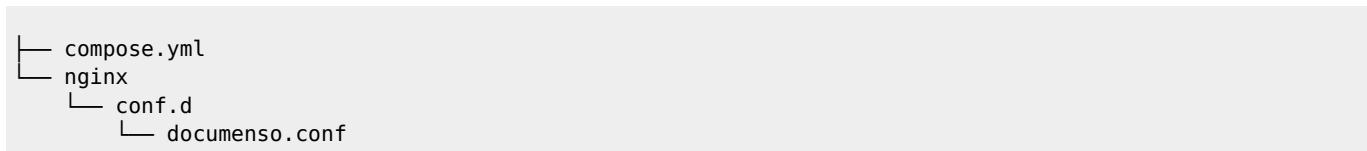

Configure Nginx dans le Docker compose

- ajouter dans le fichier compose.yml les éléments suivants :

```
nginx:
  image: nginx:1.25-alpine
  container_name: documenso-nginx
  restart: unless-stopped
  ports:
    - "8080:80" # utilisé UNIQUEMENT par Entra App Proxy
  volumes:
    - ./nginx/conf.d:/etc/nginx/conf.d:ro
  depends_on:
    - documenso
```

- Entra App Proxy pointe vers <http://localhost:8080>
- Pré-authentification Entra ID

Arborescence attendue

- Contenu de documenso.conf

documenso.conf

```
server {
  listen 80;
  server_name sign.educ-valadon-limoges.fr;
```

```
client_max_body_size 50M;

location / {
    proxy_pass http://documenso:3000;
    proxy_http_version 1.1;

    proxy_set_header Host $host;
    proxy_set_header X-Forwarded-For $remote_addr;
    proxy_set_header X-Forwarded-Proto https;
    proxy_set_header X-Forwarded-Host $host;

    proxy_set_header Upgrade $http_upgrade;

    proxy_buffering off;
}
}
```

- tester que cela fonctionne

```
docker exec -it documenso-nginx nginx -t

=> résultat attendu
nginx: the configuration file /etc/nginx/nginx.conf syntax is ok
nginx: configuration file /etc/nginx/nginx.conf test is successful
```

- Documenso doit être maintenant accessible en local sur le port 8000
